

Churn Analysis & Customer Intelligence

The Business Challenge

In the hyper-competitive OTT landscape (Netflix, Hotstar, Prime), retention is the only way to survive. You will

act as a Data Analyst tasked with identifying high-risk subscribers using a multi-dimensional dataset (Customer

demographics, Subscription tiers, and Support escalations).

Core Tech Stack

SQL & Python Integration (NumPy, pandas, sqlite3, matplotlib, seaborn), Performance Engineering (data

cleaning, feature engineering, analytics), Behavioral Visualization, Writing Actionable Insights

Project Milestones

- Relational Data Extraction: Connecting Python to SQL databases to pull multi-table datasets.
- Advanced Feature Engineering: Data imports, calculating tenure, churn rates, and customer aging.
- Executive Reporting: Translating technical findings into billion-dollar business insights.

Insights

- Churn Rate: 28.6% | Retention Rate: 71.4%
- Most of the churn is from basic subscription plan – nothing to worry in terms of major revenue impact
- Most of the churn happened in the month of Sep 2024 and, most affected state is Karnataka
- Average Tenure (Days): 1,451 | ARPU is Rs 18.8
- Total Revenue = 395
- Revenue loss due to churn = 74 | CLTV Lost = 2,047
- % Revenue loss = 18%
- monthly vs annual churn = 55.6% vs 8.3%

Action Items

- Check what happened in Karnataka – was there any increase in price, user complaints, tech issues, etc.
- Did we increase subs price for Basic plan or recently made any changes – specially in sep month?
- Check what competitor is doing – because one user has moved to competitor
- Focus on customers with 'High' & 'Med' churn risk, check their LTV (to make priority list), complaint request, reach out to them through email, SMS, calls and fix their issue.
